Continuation of 3. NOTE: The amendment to claim 1 raises a new issue of a 112 2nd paragraph rejection. It is unclear how the film completely envelopes the insulation package. In veiw of the Figures, it appears the that film only envelopes the insulation core. Thus, it would seem that the film is part of the insulation package and that it completely envelopes the insulation core.

Continuation of 11. does NOT place the application in condition for allowance because: Applicant argues that the Movsesian et al. reference does not teach a film having a hose like end section formed at an end of the film outside of a film envelope. Movsesian et al. teaches a hose-like end section formed by heat sealing elements 38 and 36. Fig. 5 of Movsesian et al. shows the film (34) which is comprised of top and bottom 38 and 36, these sections are heat sealed at 39. Additionally, Fig. 6 shows heat seal lines on all four sides of insultation cores (32). Now looking back at Fig. 5, heat seals must be formed on the remaining two edges (not shown) around insulation cores 32. These two edges would be into and out of the page as suggested by the square shapes of the modules (33) in Fig. 6. When these two edges (unseen in Fig. 5) are sealed, the structure would then form a hose-like end section. The end sections are shown heat sealed together in Fig. 5 at 35 and 39 but would appear hose-like before being heat sealed. This meets the applicants claim. Additionally, Movsesian et al. discloses edges 35 being folded (See last two sentences of Paragraph [0057]).
